

## Gasworks Arts Park Tenant Fact Sheet – soil vapour pin installation

CH2M will be onsite commencing the week of Monday 11 December to select locations for vapour pins and to undertake further field works, including:

- Installing soil vapour pins in the floor of selected buildings at Gasworks Arts Park
- Collecting samples from the installed soil vapour pins

Minimal disruption is expected for park users and building tenants during this period. Details of the work are below.

CH2M have identified approximately seven (7) locations within selected buildings at Gasworks Arts Park to install soil vapour pins and caps (image below). This means that selected buildings will only have one to two pins installed.

After meeting with building tenants, CH2M will use hand tools such as drills to create small holes (16 mm diameter) to install the vapour pins in the floors within the selected buildings. Once installed the pin is unobtrusive and is installed at-grade (level with the nearby floor). A small cap approximately the size of a fifty-cent piece will be used to cover the hole so that the installed pins can be walked on. During sampling, tubing is connected to the pin and a sample is drawn into a 1 litre metal canister.

We anticipate installation of each vapour pin will take less than one hour in most instances, and the sampling process will also take approximately one hour.

CH2M will work with the building tenants to ensure this work is scheduled at times to minimise disruption and keep the community informed as these works progress.
